Speech

German Industry Supports the Process of IIA Reform

UNCTAD High-level IIA Conference “Phase II of IIA Reform”
High-level plenary session on IIA Reform
9 October 2017
Geneva, Switzerland
Dr. Christoph Sprich
Department External Economic Policy
Federation of German Industries (BDI)

Germany benefits very much from globalization. One expression of the international activity of our companies is the German outward FDI stock of about 1.4 trillion U.S. dollars. The foreign turnover generated by German FDI is more than double the value of German exports.

However, foreign investment and job creation are associated with high risks. Therefore, our companies trust in our IIAs. Especially for German small and medium-sized companies, the biggest obstacle when investing abroad is the lack of legal certainty.

With almost 130 treaties, Germany has more IIAs than any other country. Together with the treaties of the EU, they offer a strong basis for the global activities of German companies.

Off course, reforms of old IIAs are necessary. The right to regulate of the state must be secured. The transparency of ISDS procedures must be ensured. Unjustified complaints must be prevented.

We welcome the efforts of UNCTAD and other organizations to reform IIAs. We also welcome the initiative of the European Commission to multilateralize investment protection.
From the perspective of German industry, reforms must take into account the **interests of the investors**. After all, modern and reformed IIAs must facilitate investment. IIAs must provide a high level of protection and efficient arbitration procedures while meeting modern standards of sustainability and transparency.

Thank you very much!
